

S01 - Text to Audio

The screenshot shows the Postman REST client interface. On the left, the 'COLLECTIONS' panel is expanded, showing a collection named 'GenAI-Jul-HomeAssignment' with a sub-collection 'S01-Text to Audio' selected. The main panel displays a POST request to 'https://api.groq.com/openai/v1/audio/speech'. The request body is in JSON format, containing a model ('canopylabs/orpheus-arabic-saudi'), an input string in Tamil, and voice/response format settings. The response status is '200 OK' with a size of 1.56 s and 447.04 KB. A 'Visualize' button is visible. On the right, a 'Visualize Response' panel shows a message about the response being null (binary WAV audio) and instructions on how to visualize it. The bottom status bar shows the system clock as 8:30 PM on 7/22/2026.

S02 -Multilingual

The screenshot shows the Postman REST client interface for a second request. The 'COLLECTIONS' panel on the left shows the 'S02-Multilingual' sub-collection selected. The main panel displays a POST request to 'https://api.groq.com/openai/v1/chat/completions'. The request body is in JSON format, containing a system role, a user role with a Tamil input, and an assistant role. The response status is '200 OK' with a size of 5.03 s and 2.22 KB. The 'Visualize' button is active. The right panel shows a message about the response being null (binary WAV audio) and instructions on how to visualize it. The bottom status bar shows the system clock as 8:30 PM on 7/22/2026.

S03 - GenerateAPITestcasesFromSwaggerCode

The screenshot displays the Postman REST client interface. On the left, a sidebar shows a collection named "GenAI-Jul-HomeAssignment" with several API requests, including "S03-GenerateAPITestcasesFromSwaggerCode". The main editor shows a POST request to "https://api.groq.com/openai/v1/chat/completions". The request body is a JSON object with a system prompt and a user message. The response is a 200 OK status with a JSON body containing chat completion details. The right-hand panel shows the response body and an AI assistant's explanation of the response.

Request:

```
POST https://api.groq.com/openai/v1/chat/completions

{
  "model": "openai/gpt-oss-128b",
  "messages": [
    {
      "role": "system",
      "content": "You are a Senior API Test Automation Architect with strong expertise in Java, Rest Assured, TestNG, Maven, and API schema-driven test generation."
    },
    {
      "role": "user",
```

Response:

```
{
  "id": "chatcmpl-bc88667-548e-4ab1-b11f-1dbee48338fe",
  "object": "chat.completion",
  "created": 1784732901,
  "model": "openai/gpt-oss-128b",
  "choices": [
    {
      "index": 0,
      "message": {
        "role": "assistant",
        "content": "import io.restassured.RestAssured;\nimport io.restassured.http.ContentType;\nimport io.restassured.
```

The response body is null (binary WAV audio), which means the response is audio data — not JSON. I need to send the request first to confirm the response shape, then build an appropriate visualization. Since this is a text-to-speech endpoint returning a WAV file, the visualization should display the request details and a status card (since the audio binary can't be charted).

Let me send the request to see the actual response:
